

IN THE CLAIMS

Presented below is a complete list of claims with changes marked up:

- [Handwritten initials]*
1. (Currently Amended) A server network comprising:
- a global master server;
- a local master server coupled to the ~~central~~ global master server via a first network and synchronized thereto; and
- [Handwritten mark]* one or more slave servers coupled to the local master server via a second network to perform manufacturing tasks to facilitate building products, the global master, local master, and slave servers being programmed the same and configurable to different tasks, including automatically configurable as a master or a slave server based on an ~~the~~ interface of a ~~the~~ server to which ~~they~~ the global master, local master, and slave servers are coupled to.
2. (Currently Amended) The server network defined in Claim 1, wherein one of the global master, local master, and slave servers is operable to program another server.
3. (Original) The server network defined in Claim 1 wherein communication over the first network is secure.

Sub B1
4. (Original) The server network defined in Claim 1 wherein communication over the first network is encrypted.

5. (Currently Amended) The server network defined in Claim 1, wherein communication over the first network is secured via Secure Shell (SSH).

A
6. (Currently Amended) The server network defined in Claim 1, further comprising a plurality of local master servers coupled to the global master server via the first network, wherein each of the plurality of local master servers operates with respect to the global master server asynchronously when communication via the first network is unavailable and synchronously when communication via the first network is available.

7. (Currently Amended) The server network defined in Claim 1 wherein the first network comprises an ~~the~~ Internet.

8. (Original) The server network defined in Claim 1 wherein the first network comprises a virtual private network.

9. (Original) The server network defined in Claim 1 wherein the first network comprises a physical private network.

A. Sub
Bl

10. (Original) The ~~server network defined in Claim 1~~ wherein the second network comprises a local area network (LAN).
